

Bernardo Sosa Padilla Araujo

Bernardo Sosa Padilla Araujo's interest in science began during his childhood in Argentina. He spent his first years of college studying biochemistry at the School of Biochemistry Chemistry and Pharmacy at the National University of Tucuman. During that time, he realized that his main interest was in physical chemistry and he therefore switched to the university's chemistry program.

During his fourth undergraduate year, Bernardo was awarded an AUGM scholarship. This international scholarship allowed him to study and conduct research at the Universidade Federal de Minas Gerais, one of Brazil's most prestigious universities.

After completing his scholarship, he returned to Argentina to complete his undergraduate studies. He was then granted a fellowship from the Research Council of the National University of Tucuman (CIUNT), to work as a researcher in a physical chemistry group. Concurrently, Bernardo also held a teaching assistant position in the university's Inorganic Chemistry Department.

Bernardo is currently pursuing his Ph.D. in Biochemistry and Molecular Biophysics at the California Institute of Technology. He looks forward to one day contributing to the advance of structural biology from a physical chemistry perspective with the help of computational techniques.
