

Muhammad Abul Hassan Samee

Muhammad Abul Hassan Samee was born in Dhaka, Bangladesh and earned his Bachelor of Science in computer science and engineering from Bangladesh University of Engineering and Technology (BUET) in 2006. Muhammad Abul also completed his Master of Science from BUET in 2008. He is currently pursuing a Ph.D. in the Computer Science Department of the University of Illinois at Urbana-Champaign (UIUC) as an International Fulbright Science and Technology Award recipient. Muhammad Abul believes that every computer science problem – be it related to chaos or order, tangible or abstract – must have a firm, theoretical formulation and analysis and can thus be solved.

Theoretical computer science and mathematics are the most fascinating areas of research for Muhammad Abul. He hopes to become a valuable researcher and educator when he returns to his country. Although his primary research was originally based on graph drawing and information visualization, Muhammad Abul is presently exploring other areas including computational topology, approximation algorithms, and problems at the borderline between theory and systems at UIUC.
